## R3267/3273

Spectrum Analyzers

For 3rd-G eneration M obile C ommunications
Present Digital C ommunication standards
(W-CD M A, PDC, PH S, IS-136, GSM , DECT, cdmaO ne... )

## 

New communication technologies such as 3rd Generation Mobile (IMT 2000), microwave digital broadcast, high-speed multimedia mobile access (MMAC), and satellite-based services require the latest in spectrum and modulation measurement capabilities. Furthermore, these new services must be introduced in less time and for more users than ever before.

The R3267/3273 is a high-performance spectrum analyzer designed to meet these needs.
for
evaluating/testing wide bands, high frequencies, and high-quality digital modulation signals required in these next-generation communication systems.

The 3267/3273 features a frequency span accuracy within $\pm 1 \%$ and a dynamic range of $\mathbf{- 1 5 4 ~ d B c / H z}$ (typ) in the $\mathbf{2 ~ G H z}$ band to allow accurate, repeatable measurements for high-quality digital signals. Further, its 10 Hz to 10 MHz resolution band with filter and ability to perform a 70 dB (typ, at 5 MHz offset) ACP measurement on WCDMA makes it ideal for testing of wide band signals. Finally, with a frequency
 R3267/3273 allow comprehensive measurements of even high frequency systems.

In addition, the optional digital modulation analysis option offers one-button testing of modulation parameters for communication systems including PHS, PDC, IS-136, DECT, GSM, and IS-95 as well as W-CDMA and CDMA-2000.

The R3267/3273 provides excellent value with its combination of spectrum and optional modulation analyzer, so that it can be used with applications ranging from research and development of communication devices, modules, to production line and deployment testing of communication infrastructure equipment. The R3267 and R3273: a new family of analyzers to test today's, and tomorrow's communication systems.

High Frequency and Wide Bandwidth Measurements

| $\bullet$ - Frequency range: | R3267 100 Hz to 8 GHz |

## High Speed Measurements

- Trace update rate: up to 20 times/sec.
- $1 \mu$ s fast zero-span sw eep

Simplified, Automated Measurements for Mobile Communications

- ACP (adjacent channel leakage power) measurement
- OBW (occupied bandwidth) measurement
- Channel and total power measurement
- Harmonics measurement
- Spurious emission measurement
- 2-trace simultaneous measurement
- Delayed sw eep/Gated sweep functions
- Peak list function
- Noise/Hz measurement
- XdB dow $n$ measurement
- 3rd-order measurement
- \% AM measurement
- 1 Hz resolution frequency counter

Simple Connectivity

- 6.5-inch TFT color LCD
- 3.5-inch MS-DOS compatible floppy disk drive
- Standard I/O interfaces for integration: GPIB, RS232, Parallel, and VGA
